YAZBECK

- 2017 -

California - Since 2004

*Roger Yazbeck*

 **YAZBECK**  
WE'VE GOT YOU UNDER OUR SKIN

- 2017 -

California - Since 2004

*Roger Yazbeck*

## *The Spirit of the Sea*

*I have watched the icebergs floating  
and wondered where they've gone  
walked on the horizon  
to meet the setting sun...*

*I have born the ships for centuries  
sailing this world of mine  
charted with the singing whales  
since the dawn of time...*

*I know you'll always need me  
stop drifting to be free  
ignore my generosity  
and all life will cease to be...*

*Accept your struggle, accept your strife  
don't turn away from me  
I'm your love, your hope, your very life  
The Spirit of the Sea...*

*I have witnessed people fighting  
embraced the drowning men  
dried the eyes of widows  
and gave them hope again...*

*I know the world will wake up  
and look to me because  
I am the hope of mankind  
The Spirit of the Sea...*

*I know you'll always need me  
don't turn away from me  
accept your struggle, accept your strife  
and trust humanity.*

*I know you'll always love me  
embrace me and you'll see  
I'm your hope, your dreams, your very life  
The Spirit of the Sea...*

Lyrics: Roger Yazbeck

Music: Vic Vogel

Menschen und meer - Rostock 1988

Accessories	84-87

A diver is seen from behind, standing on a sandy ocean floor. The diver is wearing a full-body wetsuit with a complex camouflage pattern in shades of brown, black, and white. The wetsuit has a hood and a belt with two large, light-colored rectangular buckles. The diver's arms are slightly bent, and they appear to be looking down at the sand. The water is a deep, dark blue, and the sand is a light, silty green. The overall scene is dimly lit, with some light reflecting off the sand and the diver's suit.

## << NO COMPROMISE >>

YAZBECK is the first brand in the world to build wetsuits from the bottom up. We do not just slap our label on generic stuff. We buy nothing that is already knit, dyed, processed, cut or laminated. Instead, we select our own yarns, knit our own fabrics, design our own camouflage and have them dye-sublimated on our Impermeallex®. We then laminate onto the neoprene we sliced ourselves at our high tech facility in the South of China, where I am spending more than half of my time supervising this whole procedure.

*Roger Yazbeck*

## Yazbeck Story

### Dear Fellow Freedive Hunter,

We welcome you to Yazbeck.

When you purchase a Yazbeck wetsuit, socks, gloves or any other product in the future, as we keep expanding, rest assured that we will have you covered. With Yazbeck, you will never be left out in the cold.

### About Myself

I have been diving and freedive hunting since the mid 1960's. I have always been an outdoors person. Besides freediving and spearfishing, swimming, hiking and hunting were passions of mine since I was a child.

The last four decades have been quite a journey: from the East Mediterranean shores; to the vast wilderness of Quebec, Canada; the cold waters swarming with life of the North Atlantic seashores of sweet New England; before finally settling in sunny and warm Redondo Beach in Los Angeles county, SoCal.

### The Creation Of Picasso America And FreeDive Shop

It was only in 1998 that I started in the business of freediving gear and equipment, as an international marketing manager for the Picasso brand, which was then owned by Messrs. Carlos Covas (Portugal) and Alessandro Picasso (Spain). Among my many tasks then, was to distribute the Picasso gear and equipment in North America and Mexico as well as the Middle East. This is how I created and founded "PicassoAmerica.com" in Montreal, Canada.

Three years later, in 2001, the company moved to Hermosa Beach, California. In October 2002, I founded "FreeDiveShop.com" and opened the first brick and mortar FreeDive Shop in the world. With the same purpose as Picasso America in mind, I introduced a completely new line of gear and equipment of amazing design, functionality and quality, to the divers worldwide. Such material was unknown to most water sports enthusiasts then, including myself.

### "NO COMPROMISE!"

In 1998 I coined the term "World's First and Only Dry/Wetsuit". It was true then and even truer now. Some say I reinvented the wetsuit, but my only goal and passion was to market and sell only the best wetsuits, made using Yamamoto 100% CR Neoprene exclusively. However, in 2003, Picasso began manufacturing wetsuits using different components with which I did not agree. In an effort to continue manufacturing the Yamamoto neoprene products, I developed the Yazbeck brand. Our mission is to continue to bring you the best wetsuit on the planet.

My promise to you can really be summed up in two words, "No Compromise", but the full story is the subject of the book I am writing about freedive hunting, its nascent industry and my life.

### Conservation

YAZBECK promotes conservation and responsible hunting, as well as inclusiveness.

In 2000, I produced the first freedive hunting competition in history with conservation as its primary goal - the "Picasso Open". It was a first in many aspects; the event was open to all divers, whether male, female or even junior divers. It was the first to ever be fully sponsored by a freedive hunting brand name: Picasso America, and the first to establish the new rules for selective hunting. Unlike sports fishing where anglers pride themselves by practicing "catch and release", which in 90% of the cases causes the fish to die later on, in FreeDive Hunting, we "release before we catch". That's one very important fact. There is never collateral damage. And what was truly a first was that only one fish per specie was permitted, with a maximum bag limit of only 7 fish.

### Environmentally Friendly; The Green Neoprene

At YAZBECK we are concerned about the earth's environment and we want to emphasize that unlike the commercially available neoprene, the Yamamoto 100% CR polychloroprene exclusively used in our products, is not a petro-chemical derivative but rather a limestone based polymer with a 99.7% calcium carbonate concentration. This feature is also acknowledged through a greater acceptance in the medical market of a plethora of products made of Yamamoto's superior Green Neoprene.

Also, each fish had to be of a minimum size, which was more stringent than the state's fishing rules.

If you have any questions or concerns, please do not hesitate to write to us and we'll be more than happy to assist you and even call you to discuss and further explain, to give advice and demystify. We are always here for you, whoever and wherever you are. As ocean enthusiasts, we are all brothers and sisters, and I feel it is my duty to share and educate. Hence our motto "We've got you under our skin"

Thank you for reading and please remember to always dive safely and hunt responsibly.

Your FreeDive Hunter Buddy,  
Roger Yazbeck - President

## - Yazbeck Lexicon -

### Light and Heavy Impermeaflex®

**Impermeaflex®** is a unique and exclusive fabric specially knit from a blend of ultra-supple, high performance, specially knitted synthetic fibers. Contrary to the traditional fabrics normally used in the past by the industry, **Impermeaflex®** has less tension and stretches 4 ways, at more than 3.5 times its own length, making it even more elastic than neoprene itself. Therefore, Yazbeck wetsuits are so supple, they fit and feel like surgical gloves.

#### Features:

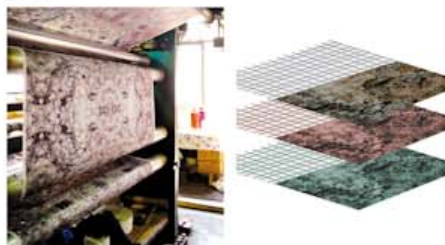

- **The look:** Rich, Glossy, Deep and the highest resolution sublimated dye, like print media. Produces 3D and Holographic Camo effects
- **The feel:** Smooth, silky, soft and supple unlike any other laminating fabric.
- **The functionality - Hydrodynamic:** it will cut through water faster, because unlike other fabrics, it's **hydrophobic**.
- Waterproof:** The wetsuit will therefore be lighter out of the water and will dry in minutes. Imagine how nice and warm it is to wear it again for another dive a few minutes later.
- Suppler:** Will stretch more and allow for an optimal comfort and much better fit. This means a longer breath-hold with each dive and longer hours in the water due to the increased freedom of movement.
- Stronger:** It will resist wear and tear more than traditional fabrics.
- Resilient:** it will not creep nor lose its properties as it ages.
- Resistant:** Will never bleach under duress and the elements, such as U.V or salt water. Therefore it will last much longer than other fabrics.

### Holoblend®

This is the natural evolution of the 3D Camouflage that Yazbeck created in 2004. It was a first, introduced to the freedive hunting and spearfishing world in 2005 through the launching of the preeminent Yazbeck Camo ThermoFlex model wetsuit. **Holoblend®** is another world exclusive by Roger Yazbeck and can only be obtained through a sublimation printing process on **Impermeaflex®**. Since 2004, Roger Yazbeck has designed, created and produced more than 15 different, unique and exclusive camouflage designs, patterns and colors. Under his own Yazbeck brand, 7 **Holoblend®** Camo wetsuits have been launched so far: the "Camo ThermoFlex" (2005 to 2007), then the "Snyper" and the "Kelp Stalker" (2008). The "Hamour"/"Scorpionfish" (2014). The 5th and 6th **Holoblend®** designs are now taking the world by storm, even before their official launching in the U.S.A. These are Yazbeck's 2015 creations: "Carbone" and "Thazard". The 7th design is now in testing as a prototype and will be launched in Hawaii in 2016 as the model "Nohu."

### Camo sublimation dye

**Impermeaflex®** is the only neoprene lamination fabric to accept sublimation dye at the highest resolution, over 360 dpi, allowing for the Yazbeck unique **Holoblend®** Camo designs to be rendered at optimal quality, giving them that rich, foot-deep and surround-like holographic Camouflage effect.

### Yamamoto® 100% Polychloroprene Neoprene

All Yazbeck neoprene products, wetsuits, gloves and socks, are made using **Yamamoto Japan Neoprene** exclusively, the only neoprene in the world that's made of 100% high density CR rubber (polychloroprene) in a totally eco-friendly manufacturing process. **Yamamoto** has succeeded in replacing petroleum with limestone through which oil is extracted under high pressure. Therefore the composition of the CR is over 99.7% calcium carbonate.

#### Features:

- **Super lightweight:** The ratio of closed cells in our neoprene is over 93%. This ensures lightweight and a lower specific gravity – essential qualities for wetsuits and swimwear.
- **Optimal heat retention:** Since nitrogen gas fills each of the individual closed cells completely.
- **Super elasticity:** Our neoprene's highest elongation is 480 – 580% compared to that of the human skin's maximum elongation of 60-70% at the armpit.
- **Uniform cell structure:** The uniform micro-cell structure of our neoprene ensures that if any part of the material surface is defaced or scarred, new independent concave micro-cells are exposed insuring continued functionality.

Read the full article dedicated to Yamamoto Neoprene in our FAQ section on our website following the QR-code:

### 100% Green Neoprene

At Yazbeck we are concerned about the earth's environment and we want to emphasize that the **Yamamoto Neoprene** used in our products is not petrochemical based but from a Limestone based polymer with a 99.7% calcium carbonate concentration. Calcium carbonate foam is much cleaner and more eco-friendly compared to petroleum-based rubber. The quantity of heat in processing and producing these raw materials is utilized for the raising of eels which are an important food source in Japan. Also, the heat is generated from used tires and the electric power used is from several dams and power stations constructed below the mountain range near the facility. The specialized Japanese technology needed to convert limestone to rubber is an advanced technology that not only produces the finest material for making Yazbeck wetsuits, but also helps protect the environment.

### Silver Titanium lining / Charcoal Titanium lining / Abyss Black Titanium lining

**NanopreneShield®** is another Yazbeck proprietary blend of Titanium Oxide lined directly on the naked open cell, rendering it slick and smooth like Teflon™ and adding extra properties to the wetsuit, such as:

- **Ease of donning;** no need for lubrication
- **Low friction;** considerably reducing the fatigue caused by the constant swimming movements and consequently decreasing oxygen consumption which in turn increases breath hold time
- **Bacteriostatic;** bacterial rash and odor inhibitor.
- **Heat Reflective;** help sustaining diver's own body heat, in order to maintain maximum core temperature
- **Feels like your own skin**

### Open Cell Neoprene/Lining

The commonly known "Open Cell" wetsuit is a wetsuit that is NOT lined at all. Once the slab of Chloroprene master foam has been mechanically "split" (hence the correct appellation "split cell"), it becomes pure rubber with tens of thousands of tiny craters, which used to be closed cells with nitrogen gas filling. They now act as suction cups, eliminating any space between the skin and the wetsuit. This is why a diver must lube such a suit before donning it, using water, or water and soap, or best of all; water mixed with some hypoallergenic and fragrance free hair conditioner. In extreme cold weather condition, should the diver desire to stay 100% dry, it can then be lubed with talc powder only.

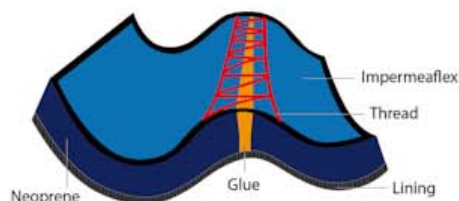

### Smoothskin Seals

Smoothskin is actually the upper and lower crusts of the master foam after it comes out of the mold. Think of an angel cake that was just baked. Imagine the crusty surface that is smooth since it was the one exposed to the heat of the oven. We at Yazbeck, use that "crust" as a waterproof seal. You will find it in most of the Yazbeck wetsuits used as a face, wrists and ankles / leg opening seals. This is also the part that enters in the fabrication of our legendary Freedive Hunter socks.

## Blind or Surface Stitching

## Polyurethane Inkdots\*

A thick and rubbery polyurethane formulae that is elastic and supple, yet scratchproof and very durable. It is applied in multiple layers through a silkscreen process to the areas where protection from abrasion as well as an anti-slip grip is needed, such as gloves palms, socks soles, speargun chest loading pads, knees and elbows.

## Twin Yazbeck Locking Clips

The best alternative to the annoying and less functional Velcro™ in that area of the body, especially where sand and kelp/eelgrass are involved, a Yazbeck Clip set is made of 5 different male / female parts, which is the best and most reliable system designed so far, in any condition, for safely buttoning the wetsuit jacket beaver tail part to its front, while at the same time, comfortably securing the trousers under it.

## GlueDot®

A circular stamp of an elastic polyurethane ink mix formulae, supple and durable, applied over all cross seam areas of the wetsuit, in order to permanently waterproof, seal and secure the area and at the same time prevent the seams from ever threading off or breaking.

## KevDot®

A circular heat patch that's applied on top of the GlueDot® at the 2 cross seams in the crotch panel— KevDot® would be an extra added defence layer against extreme stretching on these 2 highest stress areas.

## Mesh Seals Around Face, Wrists And Ankles

Mesh is similar to the Smoothskin except its surface is dimpled rather than smooth. Used in areas where high elasticity and waterproof sealing is required.

## Waterproof Glue Reinforcement

A blend of an elastic polyurethane ink applied on the seams in order to reinforce them, prevent them from threading and at the same time, waterproof them. Used primarily on gloves and socks seams as well as commercial grade wetsuits, neoprene gear and accessories.

## Amara™ Leather

Amara™ is a Japanese trademark for the highest quality Suede synthetic leather

## Yazbeck Production... From passion to perfection

Our Impermeaflex is being manufactured according to our specifications to guarantee an exclusive lamination fabric.

Impermeaflex manufacturing

Impermeaflex is then laminated on the sliced neoprene sheets.

Neoprene lamination

Dyeing our Impermeaflex

Following multiple tests and thorough quality control of the Impermeaflex, the fabric is now ready to be sublimated with one of our exclusive Holoblend Camo's.

Slicing the neoprene

After the raw, thick neoprene slabs are delivered, they are sliced to sheets in the desired thickness: from 0.7mm and thicker.

With high precision and a lot of care, the different panels are being cut out of the laminated neoprene sheets.

Cutting the panels

With great attention to detail, color and texture, the different artworks are screened by hand on the different panels before assembling.

Screening of logos and protections

Assembling the panels

This is the most important task in the manufacturing process. With great attention and precision, the seams are glued by hand. Once joined, a high pressure tool squeezes out the last air bubbles trapped between the seams.

Stitching the seams

After the glue has cured, the Impermeaflex is then surface stitched in a process called blind-stitching. This way, the neoprene itself remains intact and therefore totally airtight and waterproof.

THAZARD WETSUIT

BLUE WATER HUNTER

-THAZARD 1.5MM-

Sizing:

Available in 20 unisex sizes from 3XS (42) to 5XL-T (64T)  
(see P13 for the detailed size chart)

Materials:

- Impermeaflex® lamination.
- Thazard Holoblend® camo sublimation dye.
- Yamamoto® 100% CR grade 39 Neoprene.
- Silver Titanium or open cell lining.
- Polyurethane Inkdots® on elbows, knees and seat area for increased protection.
- Twin Yazbeck locking clips on beaver tail.

External features of the jacket:

- Zipless hooded jacket.
- Built-in hood designed for optimal breathing comfort, neck movement and complete face protection.
- Built-in 7.0mm thick cushioned speargun chest pad for optimal ease and safety when loading and unloading.
- Wider beaver tail with twin Yazbeck locking clips.
- All seams crossings on the jacket exterior are stamped with a GlueDot®.

External features of the trousers:

- High waistband trousers.

Internal features of the jacket and trousers:

- Silver Titanium or open cell.
- Totally seamless.
- 100% airtight and dry.

### YAZBECK ARTISAN SERIES LIFESTYLE T-SHIRT

Yazbeck is proud to support ocean-loving artists from all over the world with a shared passion for the ocean. Featured artist from Hawaii is Desmond Thain. Growing up in Honolulu, Desmond spent his artistic inspiration from the ocean. As a child, he would go to his local library and draw pictures of sharks and various sea creatures. As an adult, his passions have extended into free diving and spearfishing, which has motivated him to pursue his photography as he can't share his amazing oceanic views with the world. His artistic inspiration has come from artists such as Mafalda and his weekly spearfishing sessions in which he dives as deep as 120 feet in a single breath. Desmond's other passions include guitar, surfing, surfing and riding Hawaii's beautiful trails.
